

Export timing specification

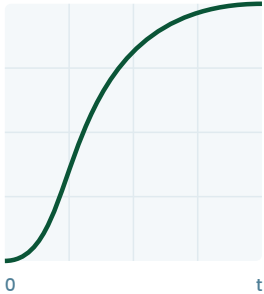

The fixed logo-first end frame. Four seconds, at 25 or 30 fps.

TIMELINE

EASING

cubic-bezier(0.33, 0, 0.15, 1)
on both fades. A linear fade reads mechanical at this length.

SAFE AREA BY CROP

16:9 1920 x 1080
margin 5% / 5% of the short edge
YouTube, broadcast, web

1:1 1080 x 1080
margin 6% / 6% of the short edge
Feed

9:16 1080 x 1920
margin 6% / 14% of the short edge
Stories, Reels, TikTok

The mark's own geometry does not animate

The dot does not travel and the two c-forms do not rotate, close or interlock. An animation that closes the gap creates a single frame that can be screenshot, and that frame is the configuration being avoided. Fade the whole lockup, or scale it uniformly 98 to 100%. Nothing else.
